Introduction

Today, researchers in the field of education and psychology of the growing interest inthecognitivestylesandteachingstylesareshown.Cognitivestyleto describe thebehavior of individuals in tothe processing of data will be considered. Themost effective approaches to the study of learning, learning styles, which inrecent years with emphasis on the relatively new framework has been developed in thecontext oflearning. Because of the interest instudying the effects of individual differences inlearning styles learning process was started in the 1950 sandearly 1960s. 1970s, extensive research was Until the doneinthis regard, but thentheamountdecreased. In the past two decadeshas been increasinginterest in thestudy oflearning stylesand nowlearning stylesandpromoteeffective learningenvironmentsisanissue ofmajorresearchfocushas thedomain been oflearning(Terry, 2001).

The term learning style Tlan the first time, (quoting Kyfh 1979) proposed. Several definitions of learning styles is provided .kyfh (1979) called the component relatively stable learning style and how students interact with the learning environment is described. Gravn Rubin and Horst (2007) Learning style is defined as the tendency for individuals to learn and adapt to their environment. Pham (2000) Learning styles in response to a proven method of learning and using stimuli in the context of defined learning. Duff (2004) the species differing learning styles, regarding coding, storage and processing are defined.

Despite the positive assessment of the role of learning styles on academic achievement, learning in school, academic motivation and training methods, its also been criticized. Among the criticisms is that accentuate the individual learning styles of students in the school system will result which will be imposed a heavy burden on the educational system. Stall Despite such criticism, the majority of studies in this field, the role of learning styles on students' achievement and motivation were positively evaluated (Hanygsfld and Sharing, 2004).

In connection with the subject of several research studies have been conductedWhichtypicallyrefersto thenumberoftheir

Aziziandcolleagues(1381) examined thelearning stylesbased onKolb theoryinmedical studentsof Qazvin Medical Universityin1380, studied and results showedthat theoveralldistribution oflearning medical stylesamong studentswereassimilating (1/43percent), convergent(1/38 percent), divergent (6.9percent) and accommodating(2.9 percent) statistical analysisofthe relationship stylesinhighereducationso betweenlearning stylesandlearning that thestudentswhilethestudentswereassimilatingbasic scienceand clinicalstudentshaveovercomeconvergentlight.

RahmanPour et al (1388) compared the learning styles of engineering students at the Faculty of Humanities at the University of Isfahan and the results have been reached between the different learning styles of students in humanities and engineering, there are significant .Theprevailingstyle ofhumanitiesstudentswerelistening. Whilethetechnical-engineering studentsmovemobility-dominated Comparestylesfor and genre. men ofmovementbetween womensuggestsdominancestyle thetwogroups. studentsatdifferent educational Betweenlearning stylesof levelswerealsosignificantdifferences.

According toVarasy(1987) in culturesin whichtight controlof parentsorwork groupsdominatedmainlydoneinstyle,contextis moredominant. For example, in Spanish, and Vietnamese, with these two characteristics, the style isseeninthe background.

According to whatwasconsider the following questions:

Firstquestion: Are yourelated to the field of learning styles and teaching styles are related?

Secondquestion: Isindependentlearningstylewithteaching styleis related to the field?

Research Methods

The objective of this research is descriptive method because it pays to check the status of their data. In terms of field performance. In termsofcross-sectional and time of data type quantitative and methods of collecting data in the field and through a question naire.

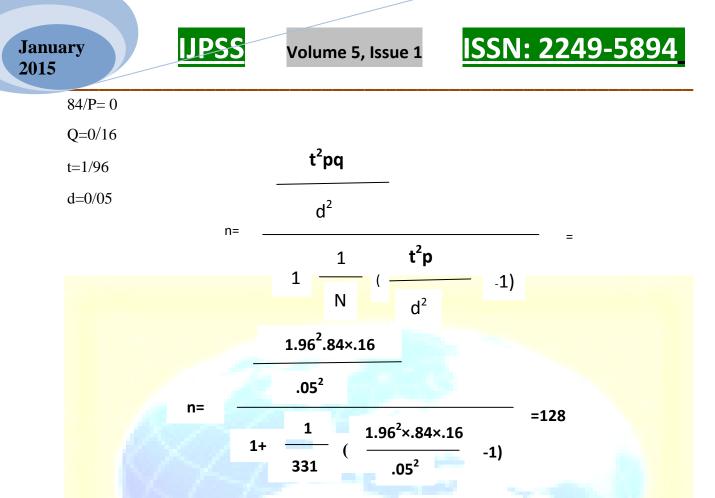

The populationand sample size

The population of this study consisted of all teachers who are working in the schools ofMeymehthe93-1392school yearTheyreportedthatthe total number ofundergraduatetraininginmanagement educationMeymehwasequal to331. Since the variance of the statistical uncertainties in the present study was a pilot studyona groupof peoplewasneededin order todetermine the variance For 30 thispurpose,agroupof subjectswererandomly selectedfrom thetarget populationThe populationislimited to a small number of variables of the formula used andquestionnairesdistributed among them, and then extract thedata from theresponsegroup, subjects were assessed using the Cochran formula.

 $P=Mean observed \div Number of Questions \times Maximum score a Question$

Thesample sizeinthisstudy,140questionnaireswere

distributedto128studentswhoachieveda perfect128questionnaireswere analyzed. Sampling procedure

Sampling wasstratifiedrandom samplingisproportional to thevolume. This meansthattheschools are separate schools forboys and girlsschoolswererandomly selected and the teacherswere chosen randomly for the studywere placed at their disposal.

Tools for data collection

In the present studywithregard to thesubjectand how itis related to the fieldindependent learning stylequestionnairewas used to the field research questionnaire containing 20 questions is. That the Liker tresponse is given. High score of 100 and a low score of 20 for each style. For determining the reliability of Cronbach's alpha was used to calculate the alphais 0/755 report.
