DEVELOPING WRITING SKILLS IN THE CONTEXT OF TEACHING ENGLISH AS A SECOND LANGUAGE FOR THE PROFESSIONAL COURSE STUDENTS

Dr. D. INDIRA PRIYADARSHINI*

K.SREE VANI*

ABSTRACT

This paper reports a study of the language needs of the Professional students. In particular, the study seeks to examine the significant differences if any in the performance of the students in vocabulary, grammar, cohesion and organization components in English due to variation in place of study in SSC. Findings of the study also shed light on the specific set of competencies for teachers of English at Engineering colleges in the state of Andhra Pradesh and informs the strategies for the development of writing skills components of the students.

Key Words: Grammatical components, strategies, English Language Teaching, Communication Skills

* Asst. Prof of English, VIDYA JYOTI INSTITUTE OF TECHNOLOGY
Introduction:

English has emerged as the most important global language. It is a wrong view to hold that it is a language of the British alone. English has evolved be a language of science and technology. Majority of all important books for higher studies are written in English. The Indians must not keep their eyes closed in this adventurous period of globalization.

The study of English dialect in this period of globalization is fundamental. English language is the most essential dialect of correspondence between various nations. In India, individuals of various states have their own particular dialect. English Language has come up as a connecting link among different states of India.

U.N. has perceived five dialects as its official dialects and of them English takes the primary position due to its background, worldwide approval of simple access to the general population. In the event that we backpedal to historical facts, we see that half of the globe was under the British government. Those nations coming specifically under British rule had by need or under compulsion to learn English and the rest either being impacted by the English culture or to keep pace with present day incline had yet to settle on learning it.

English has developed as the most imperative global language. It is a wrong view to hold that it is a dialect of the British alone. English has developed be a dialect of science and innovation. Majority of all important books for higher examinations are composed in English. The Indians must not keep their eyes shut in this courageous time of globalization.

The main objective of the present study is to ‘develop writing skills in the context of teaching English as a second language for professional course students’. Professionals at JNTU asserted that ‘knowledge of the traditional ‘grammar form’ and ‘communicative function’ are both necessary ingredients for success in the scientific-technical field’.

The survey was conducted with the following objectives in view:

- To find out the language needs of the Engineering students.
• To develop Diagnostic Tests to identify their skills in different writing components.
• To identify a specific set of competencies for teachers of English at Engineering colleges in the state, based on the needs survey.
• To find out the significant differences if any, in the performance of the students in vocabulary, grammar, cohesion and organization components in English due to variations in their place of study during SSC.

The study was conducted in three phases. In phase I Pre-test was conducted, Phase II Post-test was conducted and Phase III questionnaire was used to elicit data from the teachers who were teaching professional students. Findings of the study helped to shed light on an important facet of developing writing skills in the context of teaching English as a second language for professional course students.

Review:
Vivian Zamel (1983) looked at the composing processes of six advanced ESL students. Among the six, there were both skilled and unskilled writers. Zamel found that the least skilled writer in her study, like native-English speaking counterparts, ‘paused so often and between such short chunks of discourse that the overall relationships between ideas seemed to suffer’. She concludes that some composing problems transcend language factors and hence, are shared by both native and non-native English speakers.

Methodology:
This section introduces data about the profile of the respondents involved in the research, community of the respondents and the influence of these on the performance of the students in vocabulary, grammar, cohesion and organization components of English.

Sample:
The place chosen for research is Joginpally B.R. Engineering College located at Yenkapally, Moinabad. For my research purpose I have taken a sample consisting of 180 students who got registered 60 each in EEE, CSE, IT branches.
Variables: The variable taken into consideration is place of study during SSC.

The research tool used: The following tools were used to facilitate the research.

Phase I – Pre-test
A Pre-test was conducted to one hundred and eighty students at the beginning of the study who belonged to EEE, CSE, IT branches at B.Tech Iyr level at Joginpally B.R. Engineering College. It consisted of twenty items in the form of Part-A and Part-B separately. Part A consisted of ten questions through which the researcher tried to gain information about the learners and their awareness of writing English. Part B consisted of 50 questions based on grammar components.

Phase II: Post Test
A post test was conducted to the same set of students after a years teaching at the end of the year to test whether there was any improvement in the performance of the students in the grammar components. Comparison was made between the pre-test and the pre-test.

Phase III: Teachers Questionnaire: This tool was used to get an insight into teacher’s views regarding writing skills.

Interpretation: Frequency distribution of the student’s performance in the Pre-test for total score.

The mean and standard deviation scores of students are 25.02 and 5.02 respectively. Out of the 147 students selected for the study, 53 students have got their tests scores very close to the mean of the sample. There are 26 students who have scored less than the mean scores of the distribution; where as 68 students have scored more than the mean score of the distribution of the total sample. This indicates that there is difference in the student’s performance.

Table 1: Frequency distribution of Pre-test score for Total Sample:

</tr>
<tr>
<td>3</td>
<td>20-25</td>
<td>22.5</td>
<td>53</td>
<td>79</td>
<td>53.74</td>
</tr>
</tbody>
</table>
The mean and standard deviation scores of students are 34.95 and 5.85 respectively. Out of the 147 students selected for the study, 38 students have got their tests scores very close to the mean of the sample. There are 32 students who have scored less than the mean scores of the distribution; whereas 77 students have scored more than the mean score of the distribution of the total sample. This indicates that there is difference in the student’s performance.

### Results:

The mean and standard deviation scores of vocabulary, grammar, cohesion, organization put together by the students in English and the calculated f-values in Pre and Post-test based on the location of the school they studied are represented in table 4.7.

From the table, the obtained f-values for vocabulary (5.332) grammar (4.936), cohesion (6.729) are more significant at 0.01 levels in Pre-test; whereas the obtained f-values for organization (3.0 23) is not significant at 0.05 levels in Pre-test. It states that location of the school at SSC level has significantly influenced the performance of the students in vocabulary, grammar and cohesion components in English where as the location of the school has no significant influence in the performance of the students in organization in Pre-test.

Further, the obtained f-values for vocabulary (7189), grammar (5.794), cohesion (12.482) and organization (5.045) in Post test are more significant at 0.01 levels. It states that the location
of the school at intermediate level has significant influence on the performance of the students in vocabulary, grammar, cohesion and organization components in English.

Apart from that the mean values show that urban located school students performed better with (26.66) than the semi-urban (23.49) and rural located (23.00) school students in Pre-test.

Similarly in Post-test urban area students performed far better with (37.22) mean value that semi-urban area students which is (32.94) and least performance of students from rural areas(28.75).

It can be noted that the overall performance of the Pre-test is (8.693) and the Post-test is (13.964). It is assumed there is a tremendous improvement of (5.131) after a years teaching. Hence, the formulated hypothesis, there exists significant difference in the performance of the students in English due to the variation in the location of the school is accepted with regard to vocabulary, grammar and cohesion in Pre-test and vocabulary, grammar, cohesion and organization in Post-test.

To conclude, the location of the school has significant influence on the performance of the students in vocabulary, grammar, cohesion components in Pre-test and vocabulary, grammar, cohesion and organization components in Post-test.

**Conclusion:**
The problem selected for this study was to identify the methods and materials required for training in writing skills for professional students at advanced levels. It was considered essential for counseling the lecturers and plan a suitable schedule for skill development in general and writing in particular.

There was development after one or two sessions of teaching. Drilling of correct sentences to the professional students in their tasks is helpful in developing their writing. Mere writing practice is inadequate and the data has proved that there are interfering factors such as listening ability,
general interest in expressing technical details in lay terminology. Ambition for their career was also a decisive factor.

The findings in the present study suggest that more efforts need to be made by the teachers to develop the writing skills of the students. In conclusion it would seem imperative that appropriate measures be taken to improve the linguistic competence. The measures, among others, could be in the form of greater emphasis on vocabulary, grammar, cohesion and organization as well as remedial language strategies.
