# INCLUSIVE EDUCATION FOR CHILDREN WITH SPECIAL NEEDS: CHALLENGES, STRATEGIES, AND OUTCOMES

# Mohit Kumar Sonowal, Assistant Professor

Department of Education North Bank College Ghilamara, Lakhimpur, Assam msmohit789@gmail.com

# 1.1 ABSTRACT

Inclusive education is a revolutionary component in the education sector aimed at coming up with the inclusion of children with special needs in mainstream classrooms, thereby guaranteeing equal accessibility, equal participation and holistic growth in all learners irrespective of their abilities or inability to learn. Based on the fundament of equality and social justice, inclusive education utilizes the notion that diversity is to be welcomed but should not be pushed to the periphery. It also criticizes the past approach of isolating students with disorders to special schools and instead promotes a uniform learning environment that caters to the learning needs of diverse learners through a perceptive supporting system. This research paper explores the importance of inclusive education in not only the academic development of the learner but also in the emotional, social and psychological development of children with special needs. It also provides some of the principal impediments to effective implementation, such as insufficiently trained teachers, poor infrastructure, social stigma, adherence to strict curricula and policy-practice gaps. Based on the international best practices and Indian efforts, which include Sarva Shiksha Abhiyan and the Rights of Persons with Disabilities Act, the paper analyzes the different strategies towards the promotion of inclusivity. Among them are differentiated teaching plans, the employment of assistive tools, professional teacher development initiatives, peer support systems, and physical changes in infrastructures. The paper also examines the contributions of different stakeholders, such as teachers, parents, policymakers, and neighbourhoods, in establishing an inclusive educational environment. Its focus is that inclusive education is not only beneficial to the student with a unique need, but it is also beneficial to his or her peers, providing them with the ability to develop empathy, cooperation and appreciation of diversity. The conclusion that can be made is that the journey to inclusive education will be full of challenges, but it is inevitable and feasible. Inclusive education, when properly applied, improves the results of learning sessions, increases the number of graduates, and prepares them to enter society in the long run. It is one of the main milestones along the way of creating an equal and caring educational system where no child will be left behind.

# 1.2 INTRODUCTION

Inclusive education has been a significant development as it concerns education philosophy and practices, all with the focus on the need to support the view that all children, whether on the basis of physical, intellectual, emotional, social or linguistic differences, do deserve to be accorded the opportunity of quality education in the general education system. The inclusion of children with disability in mainstream schools is in contrast with some of the traditional models, which created separate schools or even resource rooms where they would segregate pupils with disability (UNESCO, 2009). The need to integrate children in the primary school classroom can be compared to world trends and movements, which also advocate against discrimination and equal treatment, such as the United Nations Convention on the Rights of Persons with Disabilities (UNCRPD, 2006), the Salamanca Statement (UNESCO, 1994), and the Rights of Persons with Disabilities Act It changes the perspective of speaking about what the child cannot do to the ability to address the different learning needs of a child and accommodate them (Sharma & Das, 2015). It is based on the reorganization of curriculum, method, examination and classroom work to guarantee that no children, even those with special needs, will be ignored. Indeed, all are expected to be included and assisted in the learning process (Florian & Black-Hawkins, 2011). The inclusive model gives birth to an atmosphere of understanding, tolerance and collaboration. It assists in dissolving stereotypes in society and teaches all kids how to work in a multi-ethnic global economy. It also focuses on collaborative instruction strategies, peer-assisted learning and individualized support networks, impacting not only the students with special needs but the whole classroom community. In India, the trend of inclusive education is picking up pace through national schemes like Samagra Shiksha and mainstreaming children with special needs (CWSN). Nonetheless, even within well-developed policy frameworks, the realization of inclusive practices still has systemic and social obstacles (Singal, 2019).

#### 1.3 OBJECTIVES OF THE PAPER

- 1. To understand the principles and philosophy of inclusive education for children with special needs.
- 2. To identify the significant challenges in the implementation of inclusive education in India.

Vol. 12 Issue 12, Dec 2022,

ISSN: 2249-2496 Impact Factor: 7.081

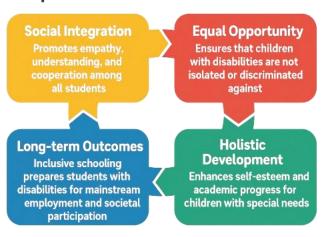

Journal Homepage: <a href="http://www.ijmra.us">http://www.ijmra.us</a>, Email: editorijmie@gmail.com

- 3. To analyze the roles and responsibilities of key stakeholders in fostering inclusive education.
- 4. To assess the academic and social outcomes of inclusive education for all learners.
- 5. To suggest practical recommendations and policy measures for strengthening inclusive education.
- 6. To highlight the legal, ethical, and societal importance of inclusive education in building an equitable education system.

# 1.4. IMPORTANCE OF INCLUSIVE EDUCATION

# Importance of Inclusive Education

- 1. **Social Integration:** Inclusive education mixes children with disabilities together with those without disabilities in one classroom. This encourages empathy, where students are taught to appreciate how other people feel. It develops collaboration as well as respect among each other and fosters friendships at all levels of ability. Children develop the skills of accepting and supporting one another, leaving fewer chances of bullying and social isolation. It is an environment that would assist the entire students to grow as broader and responsible social citizens.
- 2. **Equal Opportunity:** Inclusive schooling is a way that allows every child with or without some physical or mental difficulties to have equal access to quality education. It eradicates discrimination and provides the chance for children with disabilities to study in the same space as other children. This will enhance equality, and no kid will be left behind because of

his/her differences. Equality as an opportunity is also a fundamental human right and contributes to the establishment of a right and diverse society.

- 3. **Holistic Development:** Inclusive education helps children with special needs in both academic and emotional aspects. When they come to feel accepted and esteemed like everybody, their self-esteem becomes better. There is also improved communication, social, and life skills through their interaction with various peers. Their academics improve at a better level when they are presented with learning materials and teaching strategies for their age. Inclusion helps them grow emotionally, socially and intellectually.
- 4. Long-term Outcomes: Inclusive schooling is important to enable children with disability to get ready to venture into the real world (real life), like going to work, living in society, and becoming part of the social setup. They get to know how to collaborate, how to resolve conflicts, and how to communicate in groups, which are demanded in adulthood. Those students exposed to inclusive education have higher chances of getting mainstream employment, leading everyday lives, and becoming beneficial to society. It also decreases their likelihood of long-term dependency and enhances their general quality of life.

#### 1.5. BARRIERS TO INCLUSIVE EDUCATION

Although there have been many breakthroughs in encouraging the inclusion of education in the world, there are a lot of systemic and societal obstacles to the full realization of inclusive education. The trouble is felt especially in developing nations such as India, where facilities, training, and awareness, in most cases, do not match the requirements of various learners.

Vol. 12 Issue 12, Dec 2022,

ISSN: 2249-2496 Impact Factor: 7.081

Double-Blind Peer Reviewed Refereed Open Access International Journal - Included in the International Serial Directories Indexed & Listed at: Ulrich's Periodicals Directory ©, U.S.A., Open J-Gate as well as in Cabell's Directories of Publishing Opportunities, U.S.A

1. **Inadequate Teacher Training:** To a great extent, the absence of proper teacher training can be determined as one of the most important problems. A large number of teachers lack the skills and knowledge of the pedagogical tools necessary to deal with the issues of differentiated classrooms involving children with physical, cognitive, or learning disabilities (Sharma & Das, 2015). Teachers lack the preparation and skills to differentiate instructions and individualize support, as the training programs commonly have no special education modules (UNESCO, 2020).

- 2. **Limited Resources:** The needed infrastructure and assistive aids, including Braille materials, hearing aids or ramps, are often absent at schools to ensure the full involvement of children with special needs. The World Bank (2021) reports that the availability of basic accessibility features in schools in low-income areas is at a rate of close to 60 per cent. In the absence of such tools, students with disabilities experience great challenges when it comes to accessing quality education.
- 3. **Curriculum Rigidities:** The other key disadvantage is that the standard curriculums tend to be rigid and geared towards less talented learners. They do not allow varied learning styles or vary in speed at which children with disabilities are learning (Florian & Black-Hawkins, 2011). Also, assessment models are supposed to be mostly standardized, without having the flexibility to be adjusted to the needs, thereby leading to low academic achievements and higher dropout rates in the case of special needs students (NCERT, 2019).
- 4. **Social Stigma:** Social attitudes are also a significant deterrent. Among children with disabilities, ridicule, bullying, or ostracization is common, a phenomenon that feeds on isolation (Mehta, 2020). Judicially placed prejudices and lack of awareness in society may also render an aversion to sending their children to mainstream schools, as the family would feel embarrassed.
- 5. **Policy Gaps**: Although India has its Right of Education Act(2009) and Rights of Persons with Disabilities Act (2016) to ensure inclusive education, the implementation process is not in the same league. The school and district levels have no monitoring process or accountability. What is more, there is an insufficient budget for inclusive infrastructure and training (Rao & Kalyanpur, 2014).

# 1.6. STRATEGIES FOR EFFECTIVE INCLUSION

- 1. **Teacher Training Programs**: Life-long learning will be necessary in empowering teachers to deal with diverse classrooms. Inclusive education presupposes educators' necessity to know various kinds of disabilities, learn to differentiate the instruction and use individual support strategies. Special education is not a part of the many teacher education programs, and this will lead to unprepared teachers. A well-trained teacher (will have a positive attitude toward inclusion and will be more ready to employ adaptive pedagogies). The schools can improve themselves through ongoing professional development, seminars and by working with the special educators to achieve meaningful inclusion (Mittler, 2000, p. 83).
- 2. Individualized Education Plans (IEPs): IEPs are individual, elaborate learning plans that are aimed at guiding children who have special educational needs. IEPs are designed by teachers, parents, and specialists and specify learning goals, assessment accommodations and instructions to meet individual needs. The plans guarantee equity as they concentrate on the strengths of the student and the challenges he or she has, and they deal with them. Studies indicate that IEPs have a positive impact on the academic performance and participation of the students. Consistent feedback and a systematic approach to reviewing the results also strengthen proper implementation and continuous improvement of students (Westwood, 2018, p. 95).
- **3. Assistive Technologies:** Assistive technologies help students with disabilities to learn by themselves and achieve access to educational content and participation with disabilities.

There are several devices, such as screen readers, speech-to-text software, Braille displays, and augmentative communications, that transform inclusive education. They close down the accessibility and encourage participation in regular classrooms. However, these technologies will only be successful when there is proper training of teachers, school infrastructure and availability of resources. The use of assistive technology also enhances self-esteem and performance among students with disabilities (Abbott, 2007, p. 32).

- **4. Peer Support Systems:** Peer support mechanisms (buddy system, group learning, and peer tutoring) promote peer-to-peer and social integration and academic collaboration. Such systems are of great assistance to those students who have learning or behavioural problems. They lessen loneliness, foster compassion and improve communication among every student. The teachers are relevant in setting up the way peers should interact and appraise their progress. Studies indicate that peer-mediated support is not only helpful in enhancing academic performance and classroom interactions, but it also supports the quality of the relationships children have among themselves (Salend, 2005, p. 112).
- **5. Infrastructure Modifications:** The availability of infrastructure is central to inclusion. Architectural adjustments such as ramps, lifts, handrails, tactile maps and disability-friendly toilets allow students with lower body disabilities or those who have been blindfolded the pleasure of moving through schools with ease and dignity. These changes have the effect of providing a non-hierarchical learning experience, and a school has a commitment to inclusive learning. Ideal educational policies can hardly achieve actual inclusion without suitable infrastructure. To keep up with needs and legal requirements, school buildings should have a specific periodical accessibility audit (Booth & Ainscow, 2011, p. 49).

# 1.7. ROLE OF STAKEHOLDERS IN INCLUSIVE EDUCATION

Inclusive education is not the task of school or teacher only; it is a social activity or task, and everyone must contribute to it. These are the teachers, the parents, the government and the society in general. They all contribute differently in a manner that is related and aligned to making inclusive education effective, equitable and sustainable.

Teachers facilitate inclusive learning. They should be understanding, culturally competent and professionally prepared to work in special education. They also offer social and emotional support to students with special needs besides teaching. Educators should have access to continuous professional growth and organizational support to implement inclusive processes without any fear but relatively efficiently (Sharma & Loreman, 2014, p. 174).

Parents are supporters and collaborators in the learning process of the children. This helps establish congruence between school and home through their participation in the development of Individualized Education Plans (IEPs) and participation in academic progress monitoring as well as feedback. A study proved that to make a difference in the academic and social progress of a student with disabilities, parental involvement is important (Hornby, 2011, p. 88). Schools ought to encourage open communication, provide open communication with families and foster shared decision-making.

The governments provide a vital organizational and fiscal role. They have the responsibility of establishing inclusive education policies, giving the needed infrastructure, training of the educators, and also controlling budgetary provisions. Inclusive education cannot flourish unless powerful mechanisms of implementation and monitoring policies are in place. Like in India, the Rights of Persons with Disabilities Act (2016) introduces inclusive practices, but their implementation is going to be erratic (Ghosh & Sinha, 2020, p. 52).

The entire society should adopt diversity and break the stigmas of disability. Community-based awareness about campaigns can bring the shift, positive and representative cultural events. Inclusion has to become a societal norm and not a policy only. The attitudes in society contribute to perceptions in schooling, peer interaction and family choices (Miles & Singal, 2010, p. 15).

# 1.8 OUTCOMES OF INCLUSIVE EDUCATION

When implemented effectively, inclusive education creates far-reaching impacts, which are not limited to the classroom environment. It affects not only students with disabilities or peers but also provides a contribution to the evolution of the whole society. Positive changes in academic and social performance should also be mentioned as one of the most important outcomes. The studies reveal that students with disabilities perform better academically and have better self-esteem and communication skills in non-segregated environments than those within the segregated environment. In the same manner, non-disabled students gain by having a better ability to collaborate, empathize, and solve problems (Hehir et al., 2016, p. 29). Interaction with his peers helps in improving cognition and social development, leading to the provision of a conducive learning environment for everyone.

There is an improved degree of cultural awareness and emotional intelligence gained by frequent contact with diverse groups of students. Integrative classes help students learn diversity in terms of abilities, culture, and worldview. Such exposure will facilitate emotional

literacy, tolerance, and a feeling of belonging. Inclusive education helps to bring flexibility in the mind of the teacher and the student, as explained by Florian and Black- Hawkins (2011, p. 416) and creates a setting of respect towards individual differences and collective responsibility.

Another outcome that can be measured is the reduction of the dropout rates of special needs students. Inclusive environments decrease isolation and stigma, which motivates students and makes them attend school. By providing students with disabilities with relevant support systems like Individualized Education Plans (IEPs), assistive technology, and the sensitivity of teachers, students with disabilities have better chances of continuing with school to complete their education (UNESCO, 2020, p. 128).

Finally, inclusive education is important in enhancing a democratic and compassionate society. Those students who can grow up in inclusive environments tend to respect human rights, be tolerant of their diversity, and promote social justice. The schools turn into microsocieties of inclusive democracies, and the student learns the importance of participating and also equality and respect towards others. The ripple effect assists in creating empathetic, fair, and socially coherent communities (Ainscow & Miles, 2008, p. 15).

# 1.9 RECOMMENDATIONS

In inclusive education, a number of important steps should be reinforced on the policy, institutional and societal fronts to reinforce its implementation efforts.

To begin with, any teacher education course should be based on inclusive education modules. It means that numerous educators nowadays join the profession without sufficient background in disability inclusion, impacting the classroom performance of students with special needs. This could be addressed by the implementation of the specially focused material in education and practice in the Bachelor of Education (B.Ed.) as well as in-service teacher training that leads to inclusive teaching principles (Sharma & Forlin, 2015, p. 72). Second, the national database of children with special needs is to be created so that their tracking, assessment of their needs, and provision of support services can be performed accurately. Such a centralized system will be able to achieve focused interventions, adequate resource allocation, and the development of principled policies based on evidence (NCERT, 2021, p. 24).

Thirdly, the government ought to be in a position to put inclusion monitoring cells at the district and school levels to check whether anyone is functioning within the demand of

inclusive schooling. Such units would supervise the adequacy of infrastructures, teacher training conditions, and learning progress of students with disabilities, thereby increasing implementation accountability and transparency (Singal, 2019, p. 183).

Lastly, media campaigns and community outreach programs should be introduced to inspire inclusive values. Creating disability awareness, breaking the stereotypes and signing the success stories of inclusive education will create the perception needed to get people involved in inclusive education (Miles & Singal, 2010, p. 11)

# 1.10 CONCLUSION

Special needs education is not only a law requirement but also a moral and social need. It shows the adherence of a state to equity, justice and appreciation of diversity. Although barriers like a deficit of training, infrastructure and social stigma remain, the long-term consequences of inclusive education, which include improved grades and the development of a more empathetic society, overshadow any evils. When school staff, parents, policymakers and community members collaborate, inclusion is a road much travelled rather than an ideal. Going into the future, investing in inclusive practice does not just come at the advantage of children with disabilities, but it also enhances the whole educational system since it cultivates empathy, collaboration, and mutual development.
