Differentiation as a Path to Development in a Natural Attraction: The Case of Chapala, Jalisco, México.

Dr. Arturo Laure Vidriales*
MS. Laura Verónica Santana Gómez**
Dr. Raúl Heredia Cerda***
Dr. Carlos Salvador Gutiérrez Carrillo****

Keywords:

County development; Differentiation theory; Tourist attraction; Sustainable development; Social benefit. This study explores how differentiation strategies, rooted in ecological, cultural, and community-based assets, can drive sustainable development in Chapala, Jalisco. Drawing on tourism theory, cultural resource management, and case studies from the region, we examine how this natural destination can reposition itself through unique offerings like retirement migration, cultural heritage, ecological tourism, and water-focused community development.

This paper examines how differentiation—focusing on unique ecological, cultural, and demographic assets—can lead to sustainable development.

The aim in this study, is to support the strongness attractions and actions to make this destination as a complement for the main purpose of visiting Guadalajara Metropolitan Area.

In the specific case of the Chapala County, Jalisco, Mexico, such support has become an urgent need. This county offers an alternative tourism product—nature tourism—which includes the largest lake in Mexico, making it distinct from the four traditional tourism products offered by the state: business tourism, sun and beach and religious.

1. Introduction

Support for less favored regions is crucial in transforming them into drivers of

development within their communities, resulting in improved well-being societies.

Chapala, located in Jalisco, is known for its natural beauty and Lake Chapala, the country's

largest freshwater lake. Beyond its landscape, Chapala has emerged as a hub for international

retirement migration and eco-cultural tourism. Chapala, a picturesque town located in the

state of Jalisco, Mexico, is home to the country's largest freshwater lake, Lake Chapala.

Known for its scenic beauty, mild climate, and biodiversity, Chapala has historically been a

key attraction for both domestic and international visitors. In recent decades, the town has

experienced a surge in international retirement migration, particularly from North America,

which has transformed its economic and social landscape. Despite its natural appeal and

economic influx, Chapala faces numerous challenges including environmental degradation,

limited local economic diversification, and socio-cultural tensions stemming from rapid

demographic shifts.

Seen these challenges, differentiation emerges as a strategic approach to enhance

Chapala's appeal as a sustainable destination. This paper explores how differentiation—

understood as the development of unique characteristics to stand out in a competitive

market—can be harnessed to promote long-term, community-centered development in

Chapala. Through a review of academic literature and regional case studies, we examine how

ecological stewardship, cultural heritage preservation, and demographic uniqueness can serve

as pillars for sustainable differentiation. However, mass tourism and unchecked development

have threatened local ecosystems and community identity.

Chapala requires a comprehensive improvement plan to position itself as a key

regional option in western Jalisco. It has reached a stage of maturity that necessitates

transformation to avoid stagnation and decline, as described by Butler (1980) in his tourism

destination lifecycle theory.

This paper proposes a development strategy for Chapala based on two pillars:

differentiation (Porter, 2002) and destination rejuvenation (Butler, 1980), aiming to enhance

its main public areas without altering its natural and architectural offerings.

Mexico's regional inequalities reflect the uneven benefits derived from national development initiatives and profound socioeconomic changes over the past two decades. To address this, it is essential to promote coordination mechanisms among various levels of government and strengthen institutional capacities, especially at the state and municipal levels. This includes enhancing public administration and investing in human resources to foster regional competitiveness. Key sectors such as agriculture and tourism must receive targeted support. Efforts should also ensure the necessary infrastructure, financial deepening, and innovative credit mechanisms particularly to lower remittance costs and channel them into productive investments.

The proposal in this study advocates supporting micro and small enterprises in the tourism sector through credit access at low-interest rates, prioritizing sustainability to secure integral development for future generations.

Integrating Chapala into the Pueblos Mágicos framework requires a holistic policy involving the local community, anticipating increased tourism. Sustainable development policies should meet economic, social, and aesthetic needs while preserving cultural integrity and ecological processes. This involves complex decision-making that balances social, economic, and environmental factors, requiring a broader vision than traditional community planning allows.

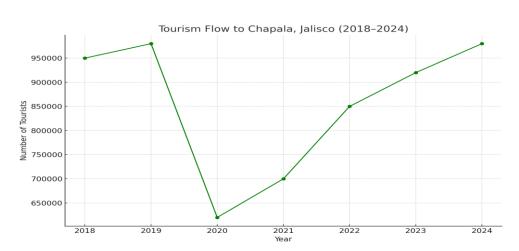

Chart 1. Tourism flow before and after COVID-19 in Chapala, Jalisco. (2018-2024)

Table 1 shows how tourism was increasing in Chapala in 2018 and 2019 in great numbers but when COVID-19 hit in global matter Chapala was affected with the flow in a dramatic way; since this industry is recovering that by 2024 have the same numbers than in 2019.

1.1. Regional Development Policies in Mexico

Regional development planning is not a new topic; several presidential administrations have implemented such plans. Unfortunately, many have remained aspirational, with communities still lacking growth in key sectors like agriculture and tourism.

1.2. Conceptual Framework: Differentiation and Sustainable Tourism

Differentiation in tourism is the process of creating a distinctive identity for a destination. It relies on local culture, ecological uniqueness, or service models to avoid commodification and improve competitiveness (Andari et al., 2022). In Chapala, cultural heritage, water ecology, and retirement migration offer paths to differentiation.

Differentiation, in the context of tourism and regional development, refers to the process by which a destination leverages its unique ecological, cultural, or social assets to establish a distinctive identity in a competitive marketplace. This strategy aligns closely with the principles of sustainable tourism, which emphasize environmental conservation, sociocultural integrity, and economic viability.

Table 1. Porter's theory of competitive advantage, the differentiation strategy.

Source: Competitive Advantage: Creating and Sustaining Superior Performance (2002).

Vol. 15 Issue 08, Aug 2025,

ISSN: 2249-2496 Impact Factor: 7.081 UGC Approved Journal Number: 48887

A sustainable differentiation approach integrates the three pillars of sustainability:

Environmental Sustainability: Chapala's natural resources, especially Lake

Chapala, must be protected through regulations, conservation efforts, and sustainable water

use practices. Ecotourism and environmental education can play a pivotal role in this regard.

Socio-cultural Sustainability: The preservation of local customs, festivals, and

traditional lifestyles is essential. Cultural tourism initiatives, such as community-led tours and

heritage routes, allow visitors to experience authentic local life while generating income for

residents.

Economic Sustainability: Economic differentiation can be achieved by targeting

niche markets such as retirees, bird watchers, and wellness tourists. Local entrepreneurship

should be supported to ensure that economic benefits are distributed equitably across the

community.

The Resource-Based View (RBV) theory supports this approach by suggesting that

sustainable competitive advantage is achieved through the effective use of rare, inimitable,

and valuable local resources. For Chapala, these include its lake ecosystem, its vibrant artistic

community, and its demographic blend of locals and foreign retirees. By strategically

developing and marketing these assets, Chapala can enhance its tourism appeal without

compromising its long-term ecological or social well-being.

In summary, differentiation is not just a marketing tactic; it is a foundational element of

sustainable development in natural attractions like Chapala. It requires coordinated action

from local stakeholders, government authorities, and tourists themselves to realize a vision of

tourism that is inclusive, resilient, and regenerative.

Local Context: Chapala, Jalisco.

Lake Chapala's geography supports fishing, agriculture, and ecotourism. The region

has also become a destination for thousands of North American retirees seeking affordability

and natural beauty (Truly, 2002). Yet, ecological degradation and social inequalities threaten

its sustainability (Smith et al., 2020).

Cultural Tourism Development

Designing cultural routes and integrating local traditions into tourism can boost

regional identity and competitiveness (Ochoa et al., 2013).

Ecological and Water-Based Differentiation

Water scarcity and pollution threaten Chapala's ecological future. Community-based

water projects and education can promote sustainable tourism and environmental

regeneration (Gleason et al., 2007).

Case Comparisons and Implications

The development strategies in Chapala resemble efforts in other regions of Jalisco and

Mexico. Arandas' use of religious tourism and La Barca's water-based development model

provide parallels (Laure Vidriales et al., 2020) (Gleason et al., 2007).

2. Research Method

2.1 This study follows a qualitative and exploratory research design, with elements of

case study methodology. The objective was to examine how differentiation strategies

contribute to the sustainable development of Chapala, Jalisco, as a natural tourist attraction.

The research focuses on identifying patterns, perceptions, and development pathways from

key stakeholders involved in tourism, local governance, and community-based initiatives.

2.2 Study Area

The research was conducted in Chapala county, Jalisco, México, located on the

northern shore of Lake Chapala—the largest freshwater lake in the country. The area is

known for its ecological, cultural, and recreational value, making it a relevant site for

analyzing differentiation strategies within natural tourism development.

Data Collection Methods

Data were collected using a triangulation approach that included the following

instruments:

International Journal of Research in Social Sciences http://www.ijmra.us, Email: editorijmie@gmail.com

31

Vol. 15 Issue 08, Aug 2025,

ISSN: 2249-2496 Impact Factor: 7.081 UGC Approved Journal Number: 48887

Journal Homepage: http://www.ijmra.us, Email: editorijmie@gmail.com

Double-Blind Peer Reviewed Refereed Open Access International Journal - Included in the International Serial Directories Indexed & Listed

at: Ulrich's Periodicals Directory ©, U.S.A., Open J-Gate as well as in Cabell's Directories of Publishing Opportunities, U.S.A.

Semi-structured interviews: Conducted with local business owners, government officials, community leaders, and tourism service providers (n=20). Interviews were recorded and transcribed with informed consent.

- Participant observation: Field visits to key tourism zones in Chapala, including

Ajijic, Malecon, and ecological reserves, with field notes and photographic documentation.

- Document analysis: Review of municipal development plans, tourism promotion

materials, environmental reports, and regional economic data from 2018–2024.

Tourism involves economic, sociological, environmental, and cultural variables—interacting under the concept of "tourism territorialization." It significantly impacts local communities, involving not just entrepreneurs and tourists but also the community and political actors.

2.4 Differentiation as an Alternative Tourism Product Strategy

Tourism influences the territorial organization. Applying Porter's Comparative Advantage Theory, Jalisco's options include cost leadership and differentiation. This study focuses on Chapala's differentiation strategy—a competitive tactic for securing a defendable market position and achieving above-average returns within the tourism industry.

Unlike other municipalities offering sun and beach, religious, commercial, or rural tourism, Chapala offers an alternative nature tourism product centered around Lake Chapala.

Lake Chapala is well-positioned as an alternative tourism destination, embodying Porter's concept of Competitive Advantage through differentiation. This positions Chapala uniquely in Jalisco and the broader western region of Mexico.

2.5 Innovation as a Strategy for a Mature Tourist Destination

Chapala is considered a mature destination, as per Butler's (1980) tourism lifecycle model. At this stage, destinations face two options: decline or rejuvenation. Strategic changes are necessary to revitalize Chapala's offerings—for example, renewing its central boardwalk and plaza.

Butler's model outlines stages: exploration, involvement, development, consolidation, and maturity. From maturity, destinations may stagnate or rejuvenate. Without tangible and intangible resource investment, destinations risk stagnation.

Butler's model outlines stages: exploration, involvement, development, consolidation, and maturity. From maturity, destinations may stagnate or rejuvenate. Without tangible and intangible resource investment, destinations risk stagnation.

3. Results and Analysis

The analysis suggests that Chapala holds untapped potential for becoming a leader in sustainable and alternative tourism in western Mexico. By focusing on differentiation through nature-based experiences, and leveraging its unique ecological and cultural assets, Chapala can stand out from other destinations in the state.

Local stakeholders, including tourism entrepreneurs, civil society, and municipal authorities, show a willingness to collaborate, provided that sustainable and inclusive planning is ensured. This alignment is essential for executing a rejuvenation strategy effectively. However, there are challenges. Funding and political continuity remain significant concerns. Without integrated municipal and state-level coordination, and without embedding the strategy within a long-term policy framework, implementation risks being partial or short-lived.

The integration into the Pueblos Mágicos program, if handled carefully and with attention to local identity, could bring greater visibility and funding to Chapala's efforts.

3.1. Recommendations

Develop a Cultural-Eco Route: Link key natural and cultural sites around Lake

Chapala into a structured tour.

Promote Community-Based Water Stewardship: Empower local groups in managing

and branding water sustainability.

Design Retiree-Inclusive Infrastructure: Tailor health, mobility, and cultural services

to international residents.

4. Conclusion

Chapala stands at a pivotal moment where its natural charm, cultural heritage, and

demographic composition present both challenges and remarkable opportunities for

sustainable development. By adopting a differentiation strategy that is deeply grounded in

sustainability principles, Chapala can redefine its trajectory from a conventional tourist

destination to a model of ecological and cultural resilience.

Differentiation allows Chapala to carve out a unique niche in the broader tourism

landscape. Leveraging its strengths—the ecological importance of Lake Chapala, its

established expatriate community, and its rich traditions—can set the foundation for a

thriving, inclusive economy that benefits residents and visitors alike. At the same time, this

strategy must avoid the pitfalls of over-commercialization and cultural homogenization,

which can erode the very assets that make Chapala distinctive.

To ensure success, it is crucial for local authorities, community members, private

stakeholders, and international actors to engage in collaborative planning and management.

Policies must support environmental protection, facilitate cultural exchange, and promote

local entrepreneurship. Educational programs and awareness campaigns should also be

instituted to foster a deeper understanding of sustainability among all stakeholders.

Furthermore, continued research and monitoring are essential. Understanding the

ecological health of Lake Chapala, the social dynamics of migration, and the evolving

preferences of tourists will help refine differentiation strategies and adapt them to emerging

challenges. As climate change, global mobility, and digital connectivity reshape travel

behaviors, Chapala must remain agile and forward-thinking.

International Journal of Research in Social Sciences http://www.ijmra.us, Email: editorijmie@gmail.com

Vol. 15 Issue 08, Aug 2025,

ISSN: 2249-2496 Impact Factor: 7.081 UGC Approved Journal Number: 48887

Journal Homepage: http://www.ijmra.us, Email: editorijmie@gmail.com

in conclusion, differentiation offers Chapala a powerful, strategic pathway to holistic development. When rooted in sustainability, it has the potential to transform the region into a beacon of responsible tourism and a vibrant, inclusive community that respects its past while embracing a future of shared prosperity.
