

FDI IN INDIA'S RETAIL SECTOR: CURRENT LIMITATIONS TO FUTURE ASPIRATIONS

Dr. Joshua. O. Miluwi*

Abstract

Retailing is the interface between the producer and the individual consumer buying for personal consumption. This excludes direct interface between the manufacturer and institutional buyers such as the government and other bulk customers. A retailer is one who stocks the producer's goods and is involved in the act of selling it to the individual consumer, at a margin of profit. As such, retailing is the last link that connects the individual consumer with the manufacturing and distribution chain. The retail industry in India is of late often being hailed as one of the sunrise sectors in the economy. AT Kearney, the well-known international management consultancy, recently identified India as the 'second most attractive retail destination' globally from among thirty emergent markets. It has made India the cause of a good deal of excitement and the cynosure of many foreign eyes. With a contribution of 14% to the national GDP and employing 7% of the total workforce (only agriculture employs more) in the country, the retail industry is definitely one of the pillars of the Indian economy.

Key Words: - FDI, Retail Sector, Indian Economy, Consumers, GDP

* Associate Professor, Commerce & Management, Career College, and Visiting faculty Career institute of international management Barkatullah University Bhopal, M.P.

The Indian Scenario:

Trade or retailing is the single largest component of the services sector in terms of contribution to GDP. Its massive share of 14% is double the figure of the next largest broad economic activity in the sector. (See Table 1)

Components	Share % in GDP (2002-03)	Growth during 2002-03
Construction	5.3	7.3
Trade	14.0	4.5
Hotels & Restaurants	1.1	4.0
Railways	1.1	5.7
Other Transport	4.3	6.0
Storage	0.1	-7.8
Communications	3.5	22.0
Banking & Insurance	6.9	11.6
Real Estate, Business/Legal Services	6.1	5.9
Defence	5.9	5.3
Other Community & Social Services	7.8	6.2
Total	56.1	7.2

The retail industry is divided into organized and unorganized sectors. Organized retailing refers to trading activities undertaken by licensed retailers, that is, those who are registered for sales tax, income tax, etc. These include the corporate-backed hypermarkets and retail chains, and also the privately owned large retail businesses. Unorganized retailing, on the other hand, refers to the traditional formats of low-cost retailing, for example, the local *kirana* shops, owner manned general stores, *paan/beedi* shops, convenience stores, hand cart and pavement vendors, etc. (see Table 2)

Outlets	1996	1997	1998	1999	2000	2001
---------	------	------	------	------	------	------

Food Retailers	2769.0	2943.9	3123.4	3300.2	3480.0	3682.9
Non-Food Retailers	5773.6	6040.0	6332.2	6666.3	7055.5	7482.1
Total Retailers	8542.6	8983.6	9455.6	9966.5	10534.4	11165.0
Source: P.G.Chengappa, Lalith Achoth, Arpita Mukherjee, B.M.Ramachandra Reddy and P.C.Ravi, Evolution of Food Retail Chains: The Indian Context, 5-6 th Nov. 2003, www.ficci.com						

Unorganized retailing is by far the prevalent form of trade in India – constituting 98% of total trade, while organized trade accounts only for the remaining 2%. Estimates vary widely about the true size of the retail business in India. AT Kearney estimated it to be Rs. 4, 00,000 crores and poised to double in 2005. On the other hand, if one used the Government's figures the retail trade in 2002-03 amounted to Rs. 3, 82,000 crores. One thing all consultants are agreed upon is that the total size of the corporate owned retail business was Rs. 15,000 crores in 1999 and poised to grow to Rs.35, 000 crores by 2005 and keep growing at a rate of 40% per annum. In a recent presentation, FICCI has estimated the total retail business to be Rs. 11, 00,000 crores or 44% of GDP. According to this report dated Nov. 2003, sales now account for 44% of the total GDP and food sales account for 63% of the total retail sales, increasing to Rs.100 billion from just Rs. 38.1 billion in 1996. Food retail trade is a very large segment of the total economic activity of our country and due to its vast employment potential; it deserves very special focused attention. Efficiency enhancements and increase in the food retail sales activity would have a cascading effect on employment and economic activity in the rural areas for the marginalized workers. Thus even without FDI driving it, the corporate owned sector is expanding at a furious rate. The question then that arises is that since there is obviously no dearth of indigenous capital, what is the need for FDI? It is not that retailing in India is in the need of any technology special to foreign chains.

Employment in Retailing:

A simple glance at the employment numbers is enough to paint a good picture of the relative sizes of these two forms of trade in India – organized trade employs roughly 5 lakh people (see **Tables 8 & 9**), whereas the unorganized retail trade employs nearly 3.95 crores.

According to a GoI study the number of workers in retail trade in 1998 was almost 175 lakhs. Given the recent numbers indicated by other studies, this is only indicative of the magnitude of expansion the retail trade is experiencing, both due to economic expansion as well as the 'jobless growth' that we have seen in the past decade. It must be noted that even within the organized sector, the number of individually-owned retail outlets far outnumber the corporate- backed institutions. Though these numbers translate to approximately 8% of the workforce in the country (half the normal share in developed countries) there are far more retailers in India than other countries in absolute numbers, because of the demographic profile and the preponderance of youth, India's workforce is proportionately much larger. That about 4% of India's population is in the retail trade says a lot about how vital this business is to the socio-economic equilibrium in India.

Table 3: Share of retailing in employment across different

Country	Employment (%)

(Chairman, Jardine Matheson
Group): "International Experience on Policy

Organized retail is still in the stages of finding its feet in India even now. Though organized trade makes up over 70-80% of total trade in developed economies, India's figure is low even in comparison with other Asian developing economies like China, Thailand, South Korea and Philippines, all of whom have figures hovering around the 20-25% mark. These figures quite accurately reveal the relative underdevelopment of the retail industry in India. (Here development is used in the narrowest sense of the term, implying lean employment and high automation)

Trade in India & South East Asia		
Countries	Organized	Unorganized
India	2	98
China	20	80
South Korea	15	85
Indonesia	25	75
Philippines	35	65
Thailand	40	60
Malaysia	50	50

Retail as a 'Forced Employment' Sector:

It is important to understand how retailing works in our economy, and what role it plays in the lives of its citizens, from a social as well as an economic perspective. India still predominantly houses the traditional formats of retailing, that is, the local kirana shop, *paan/beedi* shop, hardware stores, weekly haats, convenience stores, and bazaars, which together form the bulk. Most importantly, Indian retail is highly fragmented, with about 11 million outlets operating in the country and only 4% of them being larger than 500 square feet in size. Compare this with the figure of just 0.9 million in the US, yet catering to more than 13 times of the Indian retail market size.

The Indian retail industry was, and continues to be, highly fragmented. According to the global consultancy firms AC Nielsen and KSA Technopak, India has the highest shop density in the world. In 2001 they estimated there were 11 outlets for every 1,000 people. Further, a report prepared by McKinsey & Company and the Confederation of Indian Industry (CII) predicted that global retail giants such as Tesco, Kingfisher, Carrefour and Ahold were waiting in the wings to enter the retail arena. This report also states that the Indian retail market holds the potential of becoming a \$300 billion per year market by 2010, provided the sector is opened up significantly. It does not talk about creating additional jobs however, which should be the prime concern of the policy maker.

One of the principal reasons behind the explosion of retail and its fragmented nature in the country is the fact that retailing is probably the primary form of disguised unemployment/underemployment in the country. Given the already over-crowded agriculture sector, and the stagnating manufacturing sector, and the hard nature and relatively low wages of jobs in both, many million Indians are virtually forced into the services sector. Here, given the lack of opportunities, it is almost a natural decision for an individual to set up a small shop or store, depending on his or her means and capital. And thus, a retailer is born, seemingly out of circumstance rather than choice. This phenomenon quite aptly explains the millions of kirana shops and small stores. The explosion of retail outlets in the more busy streets of Indian villages and towns is a visible testimony of this.

The presence of more than one retailer for every hundred persons is indicative of the lack of economic opportunities that is forcing people into this form of self-employment, even though much of it is marginal. Because of this fragmentation, the Indian retail sector typically suffers from limited access to capital, labour and real estate options. The typical traditional retailer follows the low-cost-and-size format, functioning at a small-scale level, rarely eligible for tax and following a cheap model of operations.

As on January 1st of this year, there were 413.88 lakhs job seekers registered at the Employment Exchange. They register at the exchange, to enjoy the benefits and security that a job in the organized sector provides – lifetime employment, pension, and union membership etc. But over the period 1992- 93 to 2001-02, only a total of 30,000 jobs have been added in the organized sector in the whole country. A vast majority is aware of what these figures signify – that they are most unlikely to get such jobs. Therefore, they find jobs in the informal sector, mostly in retail. Retailing is by far the easiest business to enter, with low capital and infrastructure needs, and as such, performs a vital function in the economy as a social security net for the unemployed. India, being a free and democratic country, provides its people with this cushion of being able to make a living for oneself through self-employment, as opposed to an economy like China, where employment is regulated. Yet, even this does not annul the fact that a multitude of these so-called ‘self-employed’ retailers are simply trying to scrape together a living, in the face of limited opportunities for employment. In this light, one could brand this

sector as one of “forced employment”, where the retailer is pushed into it, purely because of the paucity of opportunities in other sectors.

The Waiting Foreign Juggernaut:

The largest retailer in the world ‘Wal-Mart’ has a turnover of \$ 256 bn. and is growing annually at an average of 12-13%. In 2004 its net profit was \$ 9,000 mn. It had 4806 stores employing 1.4 mn persons. Of these 1355 were outside the USA. The average size of a Wal-mart is 85,000 sq.ft and the average turnover of a store was about \$ 51 mn. The turnover per employee averaged \$ 175,000. In 2004 Wal-Mart had a 9% return on assets and 21% return on equity. By contrast the average Indian retailer had a turnover of Rs. 186,075. Only 4% of the 12 million retail outlets were larger than 500 sq.ft in size. The total turnover of the unorganized retail sector was Rs. 735,000 crores employing 39.5 mn persons.

Let alone the average Indian retailer in the unorganized sector, no Indian retailer in the organized sector will be able to meet the onslaught from a firm such as Wal-Mart – when it comes. With its incredibly deep pockets Wal-Mart will be able to sustain losses for many years till its immediate competition is wiped out. This is a normal predatory strategy used by large players to drive out small and dispersed competition. This entails job losses by the millions. India has 35 towns each with a population over 1 million. If Wal-Mart were to open an average Wal-Mart store in each of these cities and they reached the average Wal-Mart performance per store – we are looking at a turnover of over Rs. 80,330 mn with only 10195 employees. Extrapolating this with the average trend in India, it would mean displacing about 4, 32,000 persons. If large FDI driven retailers were to take 20% of the retail trade, as the now somewhat hard-pressed Hindustan Lever Limited anxiously anticipates, this would mean a turnover of Rs.800 billion on today’s basis. This would mean an employment of just 43,540 persons displacing nearly eight million persons employed in the unorganized retail sector.

With possible implications of this magnitude, a great deal of prudence should go into policymaking. Rather we seem to moving towards a policy steamrolled obviously by vested

interests acting in concert with the CII & FICCI. We need to take a deep hard look at FDI in the retail sector. In this context we must be concerned about the statement the Finance Minister, Mr. P. Chidambaram, made while making the midyear review for 2004-05. “On retail, the review notes that creating an effective supply chain from the producer to the consumer is critical for development of many sectors, particularly processed and semi-processed agro-products. In this context, it says, the role that could be played by organized retail chains, including international ones merits careful attention.”

The Question of Foreign Direct Investment (FDI) in Retail:

Given this backdrop, the recent clamour about opening up the retail sector to Foreign Direct Investment (FDI) becomes a very sensitive issue, with arguments to support both sides of the debate. It is widely acknowledged that FDI can have some positive results on the economy, triggering a series of reactions that in the long run can lead to greater efficiency and improvement of living standards, apart from greater integration into the global economy. Supporters of FDI in retail trade talk of how ultimately the consumer is benefited by both price reductions and improved selection, brought about by the technology and know-how of foreign players in the market. This in turn can lead to greater output and domestic consumption.

But the most important factor against FDI driven “modern retailing” is that it is labour displacing to the extent that it can only expand by destroying the traditional retail sector. Till such time we are in a position to create jobs on a large scale in manufacturing, it would make eminent sense that any policy that results in the elimination of jobs in the unorganized retail sector should be kept on hold. Though most of the high decibel arguments in favour of FDI in the retail sector are not without some merit, it is not fully applicable to the retailing sector in India, or at least, not yet. This is because the primary task of government in India is still to provide livelihoods and not create so called efficiencies of scale by creating redundancies. As per present regulations, no FDI is permitted in retail trade in India. Allowing 49% or 26% FDI (which have been the proposed figures till date) will have immediate and dire

consequences. Entry of foreign players now will most definitely disrupt the current balance of the economy; will render millions of small retailers jobless by closing the small slit of opportunity available to them.

Imagine if Wal-Mart, the world's biggest retailer sets up operations in India at prime locations in the 35 large cities and towns that house more than 1 million people. The supermarket will typically sell everything, from vegetables to the latest electronic gadgets, at extremely low prices that will most likely undercut those in nearby local stores selling similar goods. Wal Mart would be more likely to source its raw materials from abroad, and procure goods like vegetables and fruits directly from farmers at pre-ordained quantities and specifications. This means a foreign company will buy big from India and abroad and be able to sell low – severely undercutting the small retailers. Once a monopoly situation is created this will then turn into buying low and selling high.

Such re-orientation of sourcing of materials will completely disintegrate the already established supply chain. In time, the neighboring traditional outlets are also likely to fold and perish, given the 'predatory' pricing power that a foreign player is able to exert. As Nick Robbins wrote in the context of the East India Company, "By controlling both ends of the chain, the company could buy cheap and sell dear". The producers and traders at the lowest level of operations will never find place in this sector, which would now have demand mostly only for fluent English-speaking helpers. Having been uprooted from their traditional form of business, these persons are unlikely to be suitable for other areas of work either. It is easy to visualize from the discussion above, how the entry of just one big retailer is capable of destroying a whole local economy and send it hurtling down a spiral. One must also not forget how countries like China, Malaysia and Thailand, who opened their retail sector to FDI in the recent past, have been forced to enact new laws to check the prolific expansion of the new foreign malls and hypermarkets.

Given their economies of scale and huge resources, a big domestic retailer or any new foreign player will be able to provide their merchandise at cheaper rates than a smaller retailer. But stopping an Indian retailer from growing bigger is something current public policy cannot do,

whereas the State does have the prerogative in whether foreign entry in the retail sector should be stalled or not. It is true that it is in the consumer's best interest to obtain his goods and services at the lowest possible price. But this is a privilege for the individual consumer and it cannot, in any circumstance, override the responsibility of any society to provide economic security for its population. Clearly collective well-being must take precedence over individual benefits.

Disturbing the Hornet's Nest:

If you assume 40 mn adults in the retail sector, it would translate into around 160 million dependents using a 1:4 dependency ratio. Opening the retailing sector to FDI means dislocating millions from their occupation, and pushing a lot of families under the poverty line. Plus, one must not forget that the western concept of efficiency is maximizing output while minimizing the number of workers involved – which will only increase social tensions in a poor and yet developing country like India, where tens of millions are still seeking gainful employment. This dislocated and unemployed horde has to be accommodated somewhere else. But if you look at the growth rates of labour in manufacturing and industry, you wonder where this new accommodation can be found? Agriculture already employs nearly 60% of our total workforce, and is in dire need of shedding excess baggage. That leaves us with manufacturing as the only other alternative. With only 17% of our total workforce already employed in industry, which contributes altogether only 21.7% of our GDP, this sector can hardly absorb more without a major expansion. (See Table 5)

Table 5: Sectoral GDP, Employment & Growth Rates (%)

Sectors	Share % in GDP (2004)	Employment	Cumulative average Growth Rate during
Agriculture	22.1	60.5	2.70
Industry	21.7	16.8	6.53
Service	56.2	22.7	7.90

Source: FICCI (2004) & NSS 55th Round Employment Survey (1999-2000)

So far Indian economy has been heavily geared towards the service sector that contributes 56% of our GDP. The service sector's contribution to the increase in GDP over the last 5 years has been 63.9%. Having a high contribution from services is an attribute that is characteristic of developed economies. What is anomalous in the Indian case is the fact that in other fast developing economies, say China, manufacturing accounts for a significant share of GDP, whereas in India, manufacturing contributes a mere 23.1% of the GDP. (See Tables 5, 6 and 7)

	1992-93	1997-98 to
	to 1996-97	2002-04
Agriculture & allied sectors	20.3	13
Manufacturing, construction & quarrying	30.9	23.1
Services	48.8	63.9

	1990-96	1997-2002
Agriculture	9.3	6.4
Industry	62.2	58.5
Services	28.5	35.1

– “Industry, Ugly Duckling”, (Dec.1, 2004) The Economic Times

It is evident that the manufacturing sector has been the engine for economic growth in China, which has been growing at 10.1% since 1991. In India, the credit for its 5.9% growth over the corresponding period goes mostly to the service sector. Ironically it would seem that the Indian economy is getting a post-industrial profile without having been industrialized. Retailing is not an activity that can boost GDP by itself. It is only an intermediate value-adding

process. If there aren't any goods being manufactured, then there will not be many goods to be retailed! This underlines the importance of manufacturing in a developing economy. One could argue that the alarmingly low contribution of industry is attributable to the structural adjustments going on the sector, getting rid of the flab and getting ready to compete, but that still cannot undermine the seriousness of the issue at hand, in that only 6.215 million out of productive cohort of 600 million is employed in organized manufacturing.

Only until the tardy growth of the manufacturing sector is addressed properly and its productivity chart starts to look prettier, could one begin thinking of dislocating some of the retailing workforce into this space. Until that day, disturbing the hornet's nest would be one very painful experience for the economy.

Recommendations:

- The retail sector in India is severely constrained by limited availability of bank finance. The Government and RBI need to evolve suitable lending policies that will enable retailers in the organized and unorganized sectors to expand and improve efficiencies. Policies that encourage unorganized sector retailers to migrate to the organized sector by investing in space and equipment should be encouraged.
- A National Commission must be established to study the problems of the retail sector and to evolve policies that will enable it to cope with FDI – as and when it comes.
- The proposed National Commission should evolve a clear set of conditionalities on giant foreign retailers on the procurement of farm produce, domestically manufactured merchandise and imported goods. These conditionalities must be aimed at encouraging the purchase of goods in the domestic market, state the minimum space, size and specify details like, construction and storage standards, the ratio of floor space to parking space etc. Giant shopping centers must not add to our existing urban snarl. Entry of foreign players must be gradual and with social safeguards so that the effects of the labour dislocation can be analyzed & policy fine-tuned. Initially allow them to set up supermarkets only in metros. Make the costs of entry high and according to specific norms and regulations so that the retailer cannot immediately indulge in 'predatory' pricing.

- In order to address the dislocation issue, it becomes imperative to develop and improve the manufacturing sector in India. There has been a substantial fall in employment by the manufacturing sector, to the extent of 4.06 lakhs over the period 1998 to 2001, while its contribution to the GDP has grown at an average rate of only 3.7%. If this sector is given due attention, and allowed to take wings, then it could be a source of great compensation to the displaced workforce from the retail industry.
- The government must actively encourage setting up of co-operative stores to procure and stock their consumer goods and commodities from small producers. This will address the dual problem of limited promotion and marketing ability, as well as market penetration for the retailer. The government can also facilitate the setting up of warehousing units and cold chains, thereby lowering the capital costs for the small retailers.
- According to IndiaInfoline.com, agro products and food processing sector in India is responsible for \$69.4 billion out of the total \$180 billion retail sector (these are 2001 figures). This is more than just a sizeable portion of the pie and what makes it even more significant is the fact that in this segment, returns are likely to be much higher for any retailer. Prices for perishable goods like vegetables, fruits, etc. are not fixed (as opposed to, say branded textiles) and therefore, this is where economies of scale are likely to kick in and benefit the consumer in the form of lower prices. But due attention must be given to the producer too. Often the producer loses out, for example, when the goods are procured at Rs.2 and ultimately sold to the consumer at about Rs.15 as in the case of tomatoes now. The Government themselves can tap into the opportunities of this segment, rather than letting it be lost to foreign players. And by doing so, they can more directly ensure the welfare of producers and the interest of the consumers.
- Set up an Agricultural Perishable Produce Commission (APPC), to ensure that procurement prices for perishable commodities are fair to farmers and that they are not distorted with relation to market prices.

Recommendations for the Food Retail Sector:

With 3.6 million shops retailing food and employing 4% of total workforce and contributing 10.9% to GDP, the food-retailing segment presents a focused opportunity to the Government

to catalyze growth & employment.

- Provision of training in handling, storing, transporting, grading, sorting, maintaining hygiene standards, upkeep of refrigeration equipment, packing, etc. is an area where ITI's and SISI's can play a proactive role.
- Creation of infrastructure for retailing at *mandis*, community welfare centers, government and private colonies with a thrust on easier logistics and hygiene will enable greater employment and higher hygiene consciousness, and faster turnaround of transport and higher rollover of produce. Quality regulation, certification & price administration bodies can be created at district and lower levels for upgrading the technical and human interface in the rural to urban supply chain.
- Credit availability for retail traders must be encouraged with a view to enhancing employment and higher utilization of fixed assets. This would lead to less wastage (India has currently the highest wastage in the world) of perishables, enhance nutritional status of producers and increase caloric availability.
- Several successful models of integrating very long food supply chains in dairy, vegetable, fish and fruit have been evolved in India. These one off interventions can be replicated in all states, segments and areas. *Cross integrations* of this unique food supply chains will provide new products in new markets increasing consumer choice, economic activity and employment.

Government intervention in food retail segment is necessitated by:

- a. The lack of any other body at remote/grassroots level.
- b. Need to provide market for casual and distant self-employed growers and gatherers.
- c. Maintain regulatory standards in hygiene.
- d. Seek markets in India and abroad (provide charter aircrafts, freeze frying, vacuuming, dehydrating, packing facilities for small producers at nodal points).
- e. Provide scope and opportunity for productive self-employment (since Govt. can't provide employment).

At a subsequent stage, these interventions can be integrated into the supply chains of the foreign retailers in India and abroad, creating synergy between national priorities, market

realities, globalization, and private-public cooperation. In this fashion, the Government can try to ensure that the domestic and foreign players are approximately on an equal footing and that the domestic traders are not at an especial disadvantage. The small retailers must be given ample opportunity to be able to provide more personalized service, so that their higher costs are not duly nullified by the presence of big supermarkets and hypermarkets.

Conclusion

To summarize, debate on opening up multi-brand retail is a welcome first step. There is sincere expectation that the government will open the sector to FDI, and act fast on this front, even if it means opening the sector in a gradual and phased manner. Since the Indian retail sector is

highly fragmented and domestic retailers are in the process of consolidating their position, the opening up of FDI regime should be in a phased manner over 5 to 10 years time frame so as to give the domestic retailers enough time to adjust changes. FDI should not be allowed for multi brand stores in near future, as Indian retailers will not be able to face competition with these stores immediately. At present it is also not desirable to increase FDI ceiling to more than 51% even for single premium brand stores. It will help us to ensure check and control on business operations of global retailers and to look after the interests of domestic players. However, the limit of equity participation can be increased in due course of time as we did in telecom, banking and insurance sectors. Foreign players should not be allowed to trade in certain sensitive products like arms and ammunition, military equipment, etc. and the list of excluded products should be clearly stated in the FDI policy.

However, it can be said that the advantages of allowing unrestrained FDI in the retail sector evidently outweigh the disadvantages attached to it and the same can be deduced from the examples of successful experiments in countries like Thailand and China; where too the issue of allowing FDI in the retail sector was first met with incessant protests, but later turned out to be one of the most promising political and economical decisions of their governments and led not only to the commendable rise in the level of employment but also led to the enormous development of their country's GDP. Moreover, it is submitted that in the fierce battle between the advocators and antagonist of unrestrained FDI flows in the Indian retail sector, the interests of the consumers have been deliberately and utterly disregarded. Therefore, one of the arguments which inevitably need to be considered and addressed while deliberating upon the captioned issue is the interests of consumers at large in relation to the interests of retailers. Else, as it is said, justice delayed is justice denied. After Independence and the economic liberalization in 1990, retail may well be the next revolution. With economic slowdown behind us, the time seems just right to expand the horizons, and realize the potential. FDI in retailing would surely be a gain to India and it would also help India in becoming 'developed country'.
